

Based on the feedback we received for homework 2, we made changes in code, sketches, and write-ups.

Changes we made:

- Sketches: We deleted sketches from the write-up to make what we want to point out more clear and easy to read. We created several more detailed sketches and included coordinated multiple view visualization sketches. These refined sketches provide a clearer guide to our intended design and interactions.
- Code: We implemented a coordinated multiple view visualization to provide an interactive view of our dataset and updated the readme. We set up code to run using the given data files in the folder provided as well.
- Write-ups: We adjusted the wording based on changes made to sketches and code. We have added linking words to improve the readability of the write up. We have also narrowed our view on main takeaways instead of approaches that did not work very well.

By revising assignment 2, we learned how to make coordinated multiple view visualization and where we need this kind of visualization. We also learned the standardized format we need to use which helped us in future assignment submissions. In the future homework we have, we will try to use the ideas of multiple view visualizations to help create a better understanding of the dataset we have.
